

## CARGILL – LOADING CRANE - BELGIUM

Cargill, Inc. is an American privately held global corporation based in Minnetonka, Minnesota, a Minneapolis suburb. Founded in 1865, it is now the largest privately held corporation in the United States in terms of revenue. Cargill remains a family-owned business, as the descendants of the founder (from the Cargill and MacMillan families) own over 90% of the company. Some of Cargill's major businesses are trading, purchasing and distributing grain and other agricultural commodities, trading in energy, steel and transport; the raising of livestock and production of feed; producing food ingredients such as starch and glucose syrup, vegetable oils and fats for application in processed foods and industrial use. Cargill also operates a large financial services arm, which manages financial risks in the commodity markets for the company.

In 2015, a loading crane was treated with a duplex system: a ZINGA base coat and a PU sealing coat. This application was handled by Buijse on a blasted surface.

### System:

ZINGA 1 x 80 µm DFT

PU Coat 1 x 80 µm DFT
