

MÖNSTERÅS RAILWAY BRIDGE - SWEDEN

This railway bridge is located in Mönsterås, in the Southeast of Sweden, 50 meters from the Kalmarsund Sea Strait.

It was built in 1957 and re-coated in 1979 with a traditional 3-layer paint system.

The bridge was in very bad condition as you can see on these pictures.

In the summer of 2020 **TRAFIKVERKET** (Swedish Road Administration) decided to fully repair and recoat this bridge with a **ZINGA** stand-alone system.

The coating contractor was **LEJON Entreprenad**.

The pictures below were taken in June and in September 2020.

Our **ZINGA** Distributor **Thor SMETTE** with the representative of **TRAFIKVERKET**.

System:
Sandblasting to SA 2,5
ZINGA (airless spray) 2 x 75 µm DFT
